

BENEFITS OF A CiP

Certainty and control over work scope such as hours and types of inspections.

.....

High quality inspection work due to proper vetting and recruiting of inspectors combined with performance monitoring and governance.

.....

A program design that is focused on **identifying issues** and non-compliance at early stages in order to avoid costlier remediation or repair work once the project is operational.

.....

Inspectors are motivated to provide **'best in class service'** to our clients with full accountability for their performance and a commitment to long-term support.

.....

The **opportunity** to work with a proven and trusted service provider.

.....

Inspectors that are **fully aligned** with your values and can act as positive engagement points with stakeholders and the public.

.....

Inspectors that **understand** their role is to help deliver value to your stakeholders.

.....

An inspection program aligned with your approach to diversity and **indigenous engagement**, improving your ability to carry out projects and maintenance in indigenous lands.

.....

No added labour cost and labour management.

THE CHALLENGE

A variety of companies in British Columbia build and maintain a significant amount of industrial infrastructure. These companies are dedicated to operate all aspects of their business safely, reliably and at the lowest reasonable cost in order to pass value to their customers.

Inspectors must be focused on delivering high quality inspections in alignment with a client's corporate and project mandates, providing a value-added service to clients and stakeholders.

OUR SOLUTION

CiP

MRR offers a Controlled Inspection Program (CiP) designed to address the challenges faced in maintaining an effective inspections protocol across British Columbia on Capital Projects. Our program covers new construction or maintenance of existing infrastructure.

HOW IT WORKS

MRR will recruit and manage all inspectors required for the defined scope of the CiP. ✓

Our expertise and experience in trades and skilled labour industries ensures that clients have competent, certified inspectors when and where they are needed. ✓

MRR ensures that inspections are carried out to specified standards of quality and rigor. ✓

Inspectors are accountable to our Code of Conduct, including all required safety standards. ✓

Training is provided in alignment with a client's requirements and through MRR's dedicated, proprietary training program. ✓

Inspectors are accountable to MRR and our clients. They are aligned with the client's engagement goals, working with a client-focused ethic in order to ensure positive dynamics with contractors, peers, and the public. ✓

Aboriginal engagement is a central component in the CiP, with a sustained effort to recruit and develop quality indigenous inspectors whenever possible. ✓

Inspections are critical in monitoring the condition of existing infrastructure, identifying potential risks with new infrastructure, enabling progress on new and ongoing projects, and prioritizing maintenance requirements.

Inspections need to be carried out by trained, competent resources with the expertise to accurately diagnose condition and identify risks.

Working in and around the industrial sector we have built a solid understanding of industry operational, corporate, and provincial regulatory/government requirements.

We engage directly with our clients and their corporate culture, working to establishing a reliable, cost-effective province-wide inspections program.
